

6th Grade Planets Assignment

Use Excel to create a spreadsheet listing facts about the planets in our solar system. In Column A, list the names of the eight official planets going down, with the planet nearest the sun listed first, and the planet farthest from the sun listed last.

In Row 1, starting in cell A1, enter the following column headers:

Name of Planet	Distance from the Sun	Planet High Temperature	Planet Low Temperature	Planet Radius
----------------	-----------------------	-------------------------	------------------------	---------------

Use the website <http://www.factmonster.com> to look up the data for each planet and complete your spreadsheet.

Save the spreadsheet in your directory with a filename "Planets".
Good Luck!
